

## “EduSoft School Management & ERP System Implementation at Fountainhead School”

Fountainhead School (FHS) started with a dream of making a significant change in the Indian educational system. The journey began with a preschool and a few students, in April 2005. The Kunkni school campus located in Surat, Gujarat was started in June 2008. Currently with more than 1053 students in Nursery to Grade 9, the school is flourishing by imparting high quality innovative education.

### Business Challenge

Management of a school with a huge volume of staff and students when done on papers becomes a very tedious task which is prone to errors. At FHS, it was really becoming very difficult to co-ordinate all the administrative activities. Whenever, parents wanted to know the outstanding fees payment, they had to call the school administration to know the same. Also, regarding any inquiry related to admissions parents had to give a call to the school. For FHS administration it was a very tedious task to decide on the transportation routes and allocate the staff and students to vehicles. Initially any communication with the parents was done via post services consuming a lot of time. Hence, the management at FHS decided to get a school management solution implemented which will facilitate all the parents, staff and students.

### Journey of Success

With its consulting expertise and strong development team, Lemon Technologies Pvt. Ltd. (LTPL), developed school management software solution comprising the following unique features, to address the business challenges of FH.

- **Automated School Administration** – All the administrative activities at FH have been automated with the implementation of EduSoft. Managing the functioning of branches located in different cities or states is done through this software solution. Users & role management, group management, creating and managing boards, programs, sub-programs, grade, streams, sections etc., managing students’ information, managing detailed information about staff or vendors, time table management, attendance management and classroom management all form a part of the administration module.
- **Admission Management** – There is an online module for handling inquiries during the time of admission. Also, there is a facility of both online and offline admission management. Parents can download the admission forms online avoiding the hassle to physically go to the school and collect the form. The pre-admission processes are also fully automated and done through the system. There is a facility of auto mail and SMS services which are sent to the parents through the system, giving them the necessary details pertaining to the admission process.
- **Fees Management** – The system gives flexibility to the user to design a user defined fees structure based on his business processes. Also, the payment modes of the fees and the due date of the fees are user defined. There is a comprehensive discount management module which handles the discount related matters through the system. Also, late submission of fees is completely handled by the application. Interest calculation on late fees submission is done by the software solution only.
- **Transportation Management** – This module was entirely managed through excel sheets and had a lot of thought process and work involved. This module acts as BI

tool and suggests the shortest transportation route, from one point to the school, showing the kilometers of the route and the approximate fuel consumption on this route. Also, it aids in deciding the allocation of the staff and students to each vehicle. It also maintains the student and staff pick up and drop log.

- **Students Operation Module (SOM)** – End-to-end details related to a particular student are managed by this module. Previous education details, family details, sibling details and transportation stop details of the student are entirely managed through the system. Allocation of students to grades, sections and houses is also very effectively managed and done here. The flexibility of transferring the students from one academic year to another or transferring in the same academic year is well managed by the system.
- **Reports & Dashboards** – All the necessary and needed reports and dashboards are generated from the system giving FHS all the meaningful information they need. Information like fees collection wise report, list of transportation reports, student master reports, admission seat availability report, grade wise student admission count and board wise student admission count form a part of this module.

### Success Value Delivered

- End-to-End school administration and ERP system with all the necessary functions implemented in the system.
- Facilitated parents by giving them a separate account in the system where they can view online all the details like outstanding installments of fees, student’s attendance report and student’s progress report.
- Auto mail and SMS services kept the parents updated about all admission related information.
- Decreased paperwork to great extent making the process cost effective with the implementation of online document management module.

### About Lemon Technologies

Lemon Technologies is an ISO 9001:2008 certified software development company pioneering in database applications, especially, cutting edge technology solutions for the Gem & Jewelry industry.

Lemon has been formed with the vision to offer innovative and creative software solutions for the beneficitation of our customers worldwide such that our solutions enable them to transform the way in which they do business.
