

# Information Security Audit

Helping you achieve your goals

Lemon's team of ISA-CISA experts and software professionals can help companies in assessing the strength of their information security.

The purpose of an ISA audit with reference to an information system is to:

- ▶ Assure its integrity
- ▶ Assure its confidentiality and security
- ▶ Assure its availability

The information security audit framework includes:

- ▶ Pre-implementation and post implementation reviews
- ▶ Policies and procedures with regards data security, password protection, etc.
- ▶ Network audits
- ▶ Data integrity checks
- ▶ Firewalls
- ▶ Systems softwares
- ▶ Vulnerability tests.
- ▶ ISO 27001 framework
- ▶ Business continuity planning and disaster recovery plan

We not only do an audit of the information security system but also consult companies as to how to frame a comprehensive information security framework. We also assist companies in getting ISO 27001 certified.
